

Reveal Biosciences offers histochemical staining, immunohistochemistry (IHC), in situ hybridization (ISH), whole slide imaging, and quantitative image analysis on any TMA.

Certis Oncology provides solutions for cancer therapy and drug discovery through novel orthotopic PDX models: a small, patient-derived tumor specimen is surgically implanted into the corresponding anatomic location in immunodeficient mice.

PDX-SAR01 - Sarcoma Cancer Tissue Microarray from PDX specimens. PDX samples were sourced from Certis Oncology.

Description: Sarcoma cancer tissue array, 14 cases, with TNM staging data.

All tissues were fixed in 10% neutral buffered formalin for 24 hours and processed using identical SOPs. Sections were picked onto positively charged slides. All TMAs are cut fresh upon ordering. They all have a guaranteed six month shelf-life at 4°C from the date of shipment. Additional cores not listed are orientation markers and have no data. There may be <5% core loss per slide but the core retention rate should be >90%.

Note: Bake at 60°C for 30 minutes before use.
